# Initiatives.

## DELIVERY TRANSFORMATION

01 / 04

## Scaling Software Delivery

The digital transformation team could deliver only about two projects a year. Planning was inconsistent, workflows were fragmented, and there was no shared visibility into delivery status.

## RESULT

Delivery capacity increased from roughly 2 projects per year to 20–28 projects per year, while delivery schedules stayed...

[VIEW DIAGRAM & STORY ↗](#)

## ENTERPRISE ERP

02 / 04

## Multi-Entity ERP Rollout

Several corporate entities ran HR, finance, and operations on fragmented and largely manual processes. There was no shared source of truth across payroll, recruitment, employee records, or accounting.

## RESULT

Seven Odoo modules live in production — accounting, employee records, recruitment, helpdesk, agreements, performance management, and the shared...

[VIEW DIAGRAM & STORY ↗](#)

## AI-Powered Request Management

Developers were interrupted constantly by stakeholders across several communication channels. Requests arrived unstructured, so engineering time went to clarification rather than build.

### RESULT

Developer context switching dropped, incoming requirements arrived materially better formed, and the team gained a single source of...

[VIEW DIAGRAM & STORY ↗](#)

## Enterprise Transformation Portfolio

Business units across HR, finance, treasury, legal, credit, and operations all needed digital solutions while sharing one constrained engineering team.

### RESULT

Delivered systems spanning payroll, recruitment, employee records, performance management, finance workflows, treasury queuing, legal case management, inventory tracking,...

[VIEW FULL STORY ↗](#)

# Case Studies.

Two builds unpacked — the timeline, how delivery was actually run, and the moments that nearly derailed them. Every figure comes from delivery records or production data.

FIELD CASE

01 / 02

## Multi-Entity Approval Workflow Platform

An approvals platform for five corporate entities that replaced email-and-paper routing with composable, auditable approval chains — designed, built, and shipped to production in 30 days.

[VIEW DIAGRAM & FULL STORY ↗](#)

# AI Delivery Platform

The internal AI platform behind the delivery numbers on this page — conversational intake, an AI project-management layer, meeting automation, and human-gated automated implementation — built by the team it serves, in the gaps between client projects.

## Oak Drive Ventures Inc.

07/2023 – PRESENT

Digital Transformation Project Manager

22 departments

1,600+ employees

65 projects

5-11 concurrent

- Led a cross-functional team of 6 developers, 1 QA, and 1 designer serving 22 departments and 1,600+ employees.
- Reported directly to the COO, presenting sprint and portfolio updates to the C-suite and department heads.
- Delivered 65 projects end to end over 3 years — intake, prioritization, sprint execution, UAT, change management, and go-live.
- Led the transition from traditional project execution to Agile delivery (Scrum), running sprint planning, backlog refinement, and retrospectives.
- Reduced developer context switching by centralizing stakeholder intake through an AI-powered ticketing system.
- Created executive dashboards in Coda, Gamma, Linear, and a custom app for real-time roadmap, velocity, and sprint visibility.
- Improved stakeholder communication through transparent project tracking, sprint updates, and an AI-powered support channel.
- Designed wireframes and user flows in Figma, translating business requirements into user-centered technical solutions.

- Optimized delivery processes through risk identification, bottleneck analysis, and automation of intake, ticket routing, and backlog administration.
- Managed delivery of enterprise applications — HRIS platforms, ERP modules, and collection automation tools — coordinating 3 external vendors (Heliconia, Jeonsoft, Pinfront).
- Balanced 5–11 concurrent projects with predictable schedules, documenting each across Coda, Figma, and Gamma.

## TaskUs – SuperBam · Remote

02/2021 – 06/2023

### Content Moderator

- Protected and monetized content for high-profile creators through YouTube copyright claim workflows, separating original client content from re-uploaded and pirated copies at daily-ingestion scale.
- Specialized in potential and Pex claims to identify and monetize infringement across both trending and long-tail videos.
- Coordinated with supervising departments to prioritize takedowns of popular videos being re-uploaded by other channels.
- Provided email and technical support for the Skillz gaming platform, resolving user-reported app and game issues.

## EISSS

10/2017 – 01/2021

### Project Engineer

- Managed instrumentation and control projects end to end — proposals, design, procurement, installation, and commissioning — for industrial clients including Petron Bataan Refinery, San Miguel (Monterey Foods), Peter Paul Philippines, and South Luzon Power Generation.
- Served as single point of contact for clients and suppliers worldwide, assessing plant engineering problems and converting them into 2D and 3D CAD system drawings that aligned clients and contractors.
- Prepared full project proposals — scope, material listings, budgets, and drawings — and planned the best-fit solution for each client problem.
- Supervised on-site execution: permit-to-work and safety documentation, worker safety monitoring, instrument calibration, and as-built documentation on every completed project.
- Performed plant-wide asset verification and system-drawing updates at the Kalayaan Pumped Storage Power Plant.
- Built and delivered product presentations, client trainings, and engineering lessons for new sales representatives.

## **SJ E&I Inc.**

02/2016 – 09/2017

### QA/QC Engineer

- Handled instrumentation QA/QC during construction of Unit III at the Team Energy Pagbilao Power Plant.
- Raised requests for inspection for cable loop checking and final instrument calibration, and witnessed pre-loop and final loop checks in the DCS.
- Documented thousands of pulled, terminated, and loop-tested cables and installed instruments in a plant-wide cable and instrument matrix maintained in Google Sheets.

## **Puyat Steel Corporation**

04/2015 – 01/2016

### PLC/Instrument Technician

- Maintained and repaired PLC-monitored instruments and electrical equipment across the plant, troubleshooting machines during downtime to restore operation.
- Performed preventive maintenance of electrical panels, controls, and motor drives; fabricated and hardwired control panels.
- Tested new and rewound AC/DC motors and supported maintenance of the main switchboard, generators, air compressors, and plant lighting systems.

# From Business Problem → Production.

ERP & HR PLATFORMS

9 PROJECTS ^

**Enterprise ERP Transformation Program >** LED  
Org-wide rollout replacing fragmented HR, payroll, accounting, recruitment, helpdesk, and performance processes with connected ERP workflows.

**Central Employee Information System >** LED  
Employee profiles, movements, disciplinary cases, exits, and HR reporting feeding every other ERP module.

**ERP Accounting Module >** COORDINATED  
Financial reports, assets, bills, journal entries, audit access, and specialized reporting corrections.

**HR & Internal Helpdesk >** LED  
Structured ticket workflows with team-specific visibility, reporting, exports, FAQs, and resolution tracking.

**ERP eLearning Evaluation >** COORDINATED  
Business evaluation of standard employee-learning features against HR requirements ahead of implementation.

**Payroll Implementation — 1,600 Employees** LED  
Payroll rules, leave, statutory contributions, migration, parallel runs, UAT, cutover, and post-launch support.

**Performance Management System >** LED  
KRAs, appraisals, performance conversations, reports, and PIP workflows for managers, employees, and HR.

**Employment Agreements Module >** LED  
Offer, contract, and agreement-template generation with controlled document access.

**Performance Evaluation Form Automation >** LED  
Digitized evaluation cycle — account setup, submissions, performance conversations, and HR monitoring of the first full cycle.

---

## RECRUITMENT & ONBOARDING

4 PROJECTS ^

### Multi-Company Recruitment Platform >

LED

Manpower requests through Day-1 onboarding, with approval routing, applicant tracking, and strict company-level data isolation.

### ERP Recruitment Module >

LED

Vacancies, applicants, job offers, contracts, and centralized recruitment reporting for HR.

### Recruitment Automation with Executive Email Approvals >

LED

Manpower requests to completed hiring: executive email approvals, external integrations, and candidate-data controls.

### Async Interview Platform >

LED

Candidate interviews without simultaneous availability — end-to-end testing, training, turnover, and rollout.

---

## LENDING & CREDIT

7 PROJECTS ^

### Loan Origination System >

LED

Loan requests, verification, approvals, role-based access, encryption, data masking, and audit trails.

### Credit Approval Queuing >

LED

Digitized submission, queuing, review, and approval of credit applications with role-specific dashboards.

### Nextbank Companion App — Sister Lending Company > OVERSIGHT

Companion implementation serving a second lending entity's loan and customer-processing operations.

### Universal Finance System >

OVERSIGHT

Configurable finance platform — customers, loans, charges, amortization, collateral, letters, permissions, and reporting.

### Nextbank Companion App — Microloan Operations > OVERSIGHT

Loan, payment, and collection workflows: payment-file processing, production tagging, large reports, and health checks.

### Nextbank Core Implementation — Sister Lending Company > OVERSIGHT

Core lending-platform initiative supporting the entity's loan and customer-management operations.

Structured evaluation criteria and risk visibility for MSME lending decisions.

## COLLECTIONS &amp; RECOVERY

6 PROJECTS ^

## Unified Collection Tool &gt;

LED

Consolidated separate collection applications into one platform — development, migration, UAT, parallel testing, rollout.

## Collection Queuing System &gt;

LED

Queue for collection requests, swiping, releases, and acknowledgements, integrated with the ATM inventory system.

## Collection Automation Platform &gt;

LED

Standardized collection workflow adopted across five operating areas of a microloan product.

## Field Collection Tool &gt;

LED

Structured recording of field collection activities, customer interactions, and outcomes.

## Tele Collection Tool &gt;

LED

Telecollection follow-ups with centralized monitoring of remote collection work.

## Legal &amp; Remedial Case Management &gt;

LED

Centralized case information, actions, and monitoring, pushed through UAT, turnover, and rollout.

## FIELD &amp; BRANCH OPERATIONS

7 PROJECTS ^

## Field Itinerary Management — Uniformed Personnel &gt;

LED

Itineraries, visits, calls, and GPS tracking replacing legacy workflows; offline capability and a stabilized go-live.

## Field Itinerary Management — Civilian Personnel &gt;

LED

Itinerary and field-activity management for scheduled client work by civilian staff.

## ATM Inventory &amp; Movement Tracking &gt;

LED

Custody, availability, and processing visibility for ATM inventory across the organization.

## Local Bank &amp; Passbook Inventory System &gt;

LED

Local-bank records, passbooks, surrendered ATMs, and client-account status handling.

## Pouch Receiving System >

LED

Inbound/outbound pouch and item tracking between branches, departments, and the head-office mailroom.

## Online Marketing Representative Automation >

LED

Early-stage automation of the online representative workflow, being moved from idea to defined project.

---

## FINANCE AUTOMATION

2 PROJECTS ^

## Request-for-Payment Automation >

LED

Weekly RFP generation with Accounting validation, covering card-statement expenses with incomplete invoices.

## Budget Automation Tool >

OVERSIGHT

Automated budget templates, calculations, recasting, branch updates, and consolidated inputs.

---

## AI & AUTOMATION

7 PROJECTS ^

## AI Delivery Platform >

LED

AI conversations, ticketing, Linear integration, meeting automation, and automated development workflows for the team.

## Smart Improvement Recommendations >

OVERSIGHT

AI pipeline analyzing repositories for prioritized code-quality, security, performance, and architecture recommendations.

## Zero-Touch Maintenance >

LED

AI agents implementing and monitoring selected development issues via GitHub integration, webhooks, and label tracking.

## Discord AI Chat Assistant >

OVERSIGHT

Departmental AI assistant with personas, worker agents, and project-thread interpretation.

## Telegram Assistant Bot >

OVERSIGHT

Multi-user Gmail and Calendar assistant with user isolation and security testing.

## AI-Powered Development Workflow >

LED

Shared AI tools and practices adopted across the development team.

## Spec-Driven Development Practice >

LED

Specification-first development standard so requirements are defined before coding.

---

## DATA & ANALYTICS

8 PROJECTS ^

### Executive Scoreboard Dashboard >

LED

Consolidated executive scoreboards with planned Linear, Clockify, and operational data integrations.

### Department Delivery Dashboard >

LED

Department-level delivery and performance dashboard feeding the executive view.

### Data Loader Automation >

OVERSIGHT

Scheduled extraction, file generation, and loading across Postgres, Snowflake, S3, and Google Chat.

### Analytics Exchange >

COORDINATED

Snowflake validation and analyst capability-building toward self-serve data access.

### Snowflake Ecosystem Modernization >

OVERSIGHT

Exploration of Cortex, Openflow, cost management, and dashboards to modernize the data platform.

### Snowflake Openflow Exploration >

COORDINATED

Data-movement exploration connecting operational systems such as the ERP with Snowflake.

### Marketing Representative Intelligence >

LED

Employee and release data combined for representative performance monitoring; scoping and MVP planning.

### Marketing Representative Productivity Analysis >

LED

Regression analysis linking operational data to representative performance.

---

## INTERNAL PLATFORMS

7 PROJECTS ^

### Greenlight Document Workflow Platform >

LED

Digitized forms, uploads, document types, and department workflows with customized business rules.

### Project & Workspace Hub >

COORDINATED

Central store of roles, milestones, blockers, decisions, and success measures, aligned with Linear reporting.

## Policy Hub >

COORDINATED

Company policies, templates, submissions, and approval workflows with structured browsing and access controls.

## Bucketlist V2 Modernization >

OVERSIGHT

Redesigned V2 architecture with testing, migration, user transition, and turnover.

## Transaction Queuing — Partner Organization >

LED

Early business-process scoping for a partner organization's transaction queuing, with the third-party vendor.

## Team Workspaces Platform >

OVERSIGHT

Workspace environment and supporting apps, including sign-in OTP delivery and meeting-app enhancements.

## Room & Parking Reservation >

LED

Availability checking and conflict-free reservations for meeting rooms and parking.

HOW I WORK

# Principles.

01 Build systems, not heroics.

02 Measure outcomes, not activity.

03 Simplify before scaling.

04 Use AI to remove repetitive work.

WHAT OTHERS SAY

# Recommendations.

01 / 05

“

Working under JC across several projects running at the same time — from field operations tools to an AI-powered automation initiative — was a genuinely good experience. He plans ahead, communicates clearly, and delivers consistently even with a full portfolio in flight. He has a way of turning complex ideas into working solutions.

---

Emmanuel Louis Gonzaga

Reported to JC directly · December 2024

“

I worked with JC on several enterprise system development projects. He's a very detail-oriented person and has the ability to efficiently handle multiple large-scale projects at the same time without losing sight of the finer details that make or break enterprise implementations. I highly recommend JC to anyone looking for a meticulous, dependable, and skilled professional in enterprise systems development.

---

Jae-Mar Arenque

CEO of Pinfront Digital · August 2026

“

Engr. John Carlo was a great client to work with. He was clear and organized when explaining the requirements, had a good understanding of the overall workflow, and was always easy to communicate with. I also really appreciated his professional and friendly approach throughout the project. It was a smooth and positive experience working with him.

---

Ronak Viramgama

Python · Odoo Developer — JC was the client · August 2026

JC is a good teammate — always dependable and easy to approach. He brings a good working vibe and finishes assigned tasks quickly and accurately.

Harrison Wallace

COO at TaskUs – SuperBam · June 2023

JC has the initiative to finish the task in timely manner. He is also a team player and grounded.

Lisette Racoma

Lead, I&C at FDC Utilities Inc. — managed JC directly · April 2023

WHERE I OPERATE

## Capabilities.

### Agile Transformation

Led the shift to Scrum; delivery capacity grew from 2 to 20–28 projects/year.

### Technical Delivery Leadership

Led 6 developers, 1 QA, and 1 designer across 65 projects delivered end to end.

### AI Workflow Design

Designed the AI-powered intake, ticketing, and delivery workflows the team runs on.

**Process Optimization**

Automated intake, ticket routing, and backlog administration to cut context switching.

**Enterprise Systems (ERP / HRIS)**

Connected ERP workflows serving 22 departments and 1,600+ employees.

**Cross-Functional Leadership**

Balanced 5–11 concurrent projects across departments with predictable schedules.

MORE OPERATING AREAS

+ 6 CAPABILITIES

**Portfolio & Program Governance**

Real-time roadmap, velocity, and sprint visibility across the whole portfolio.

**Vendor Management**

Coordinated three external vendors across enterprise application delivery.

**Stakeholder Management**

Centralized stakeholder intake through an AI-powered ticketing system.

**Executive Reporting**

Reported directly to the COO; sprint and portfolio updates to the C-suite.

**Change Management**

UAT, training, cutover, and post-launch support on every rollout.

**Risk & Dependency Management**

Risk identification and bottleneck analysis built into delivery planning.

BACKGROUND

# About.

Licensed I&C Engineer – ranked 8th of 1,057

10+ years engineering & software delivery

65 projects shipped end to end since 2023

01

## THE ENGINEER

I started in industrial control systems — a licensed Instrumentation & Control Engineer, ranked 8th of 1,057 nationally, spending five years inspecting and commissioning control systems in plants and factories. That is where I learned that systems fail at their interfaces, and that a checklist beats a hero.

02

## THE PIVOT

In 2023 I retrained as a full-stack developer — a deliberate reinvention, not a detour. I wanted to build the systems, not just inspect them. That same year I joined Oak Drive Ventures to lead digital transformation.

03

## THE DELIVERY LEADER

Today I run software delivery for a team of six developers, one QA, and one designer serving 22 departments and 1,600+ employees, reporting to the COO. My job is the delivery system itself: Agile cadence, AI-powered workflows, and process design that took the team from 2 projects a year to 20–28.

## CONTACT

# Let's talk

Email or message me directly. Whether you want to compare notes on delivery systems, dig into a case study, or explore working together — the door is open.
